THE TOP PERFORMANCE **IGP PRODUCT RANGE**

For exterior architectural applications, IGP Pulvertechnik AG offers its diverse pearl mica coating powders in three different certified weathering and performance classes. Depending on the building location and local atmospheric influences, the shades are available in the following qualities: "standard weather-resistant", "highly weather-resistant" and as our "ultra highly weather-resistant" premium product.

Notes on cleaning and application

Cleaning recommendations for effect powder coatings Abrasive cleaning methods are particularly unsuitable when dealing with effect coatings as erosive cleaning can destroy the effect pigments that are anchored in close proximity to the surface. Sensible cleaning intervals also depend on the weathering stability of the binders and should amount to between 1 and 3 years depending on contamination and aesthetic demand.

You can find further information in our "Technical Information 106" (Cleaning recommendation for IGP coating powders with pearl mica effect, façades)

Weathering categories and IGP standard warranty period in accordance with certifications									
Product qualities	1 year	3 years	5 years						
IGP-DURA®face 58									
IGP-HWFclassic 59									
IGP-HWFsuperior 57									
Certification by quality associations, Test Report									
GSB	Standard	Master	Premium						
Qualicoat	Class 1	Class 2							
AAMA (Test Report)	2603-15	2604-13	2605-13						
IGP standard weathering duration									
Depending on location, substrate, pre-treatment, coating structure, cleaning cycles	up to 5 years	up to 10 years	up to 20 years						

Pearl mica delivery programme									
	Line/product line	Surface finish		Product group and gloss range			Further particularity		
Increasing weather stability		Unstructured	Structured	Deep matt	Matt	Silk gloss			
	IGP-DURA®face, Series 58	Smooth finish			5803	5807 S-Type ¹	Easy2Clean; EPD ²		
			Fine structure		581M		EPD ²		
	IGP-HWFclassic, Series 59	Smooth finish			5903 S-Type ¹	5907 S-Type ¹	Easy2Clean; EPD ²		
			Fine structure	591T					
	IGP-HWFclassic, Series 57	Smooth finish			5703	5707	Easy2Clean effect		
			Fine structure	571T					

 $^+$ S-Type products contain a balanced mix of additives in order to increase the resistance of the film to notching stresses. ² Abbreviation for Environmental Product Declaration; for the achievement of credits for green building labels such as DGNB, LEED or BREEAM.

IGP PEARL MICA EFFECT – ATTRACTIVE PROTECTION FOR YOUR FACADE

The IGP pearl mica effect sample collection shows several examples of weather resistant and highly weather resistant pearl mica shades in a variety of gloss levels and structure options. With their extraordinarily brilliant effect and their flawless surfaces, the IGP pearl mica coating powders are among the most popular effect coatings on the market.

Permanent protection through robust surfaces

Façade components are more likely to be exposed to abrasive or scratching stresses during transport, installation and thorough cleaning. These stresses can lead to matting and scratch marks. IGP façade coatings from the new S-Type¹ series are characterised by robust surfaces. Both in the Martindale test and in simple experiments involving green Scotch tape and paper, for example, they exhibit a greater scratch resistance compared to standard powder coating surfaces. (Product range table) In addition, all surfaces of the (ultra) highly weatherresistant Series 59/57 as well as the silk gloss variant of Series 58 come with Easy2Clean for better cleanability, which reduces the attachment of dirt particles and can therefore prolong cleaning intervals.

Innovative manufacturing processes

... make IGP pearl mica effect powder coatings one of the most reliably applicable coatings in the coating industry. The manufacturer can choose from three different manufacturing processes for including effect pigments into the coating matrix, based on effect quality and particle size: the economical IGP Mica bond process, the IGP Premium bond process, particularly suitable for the fine pearl mica

effect, or the completely innovative IGP-Effectives® technology. IGP-Effectives® technology stands for utmost application reliability in terms of consistency of effect and shade. Ask to see our IGP-Effectives® brochure.

Applications

Due to their excellent durability and applicability, the pearl mica powder coatings presented here are primarily used as metal facade coatings and for outdoor industrial applications with high demands for durable protection and decorative effect, such as:

- Facades and window elements
- Secondary building components
- Urban and outdoor furnishings
- High quality outdoor durable consumer goods

Pearl mica particles enhance the gloss level and shade stability by reflecting a part of the energy-intensive UV radiation and the long-wave thermal radiation. For application on steel and galvanised steel from corrosion category C3 or higher, we recommend the use of an anti-corrosive primer, e.g., IGP-KORROPRIMER 1001.
